Speed Test Tool from Community Anchor Institution Working Group

Speed Test Tool Presentation at 2011 SMM

The CAI data working group proposes a new end user initiated speed test tool designed for use by CAI practitioners nationwide. The purpose of the tool is to collect much needed data on the capacity of CAI institutions around the country but also help raise awareness around the types of teaching and learning applications enabled by R&E networking infrastructure. Project team members will be on hand to discuss the project and seek feedback from the Performance WG.
