Policy Issues Submitted by Campuses

There needs to be a process or responsible party to determine the attribute release policy for each SP. This is more of an issue, for example, if the SP wants an actual individual identifier for a person, rather than just an affiliation attribute. The more privacy we erode, the more of an issue we have.

Each campus will have to develop a local policy and practice on this issue.

User training, already a significant public services workload, can become more complicated due to the addition of another access option. Hopefully, over time as Shib becomes the norm, this will settle out to be a win.

To what extent does integration with EZProxy help on this issue?
