

Family reunification: Problem

After a disaster

- Local or wide-area displacements
- Hospitals often a focal point
- Face flood of inquiries about the missing
- Staff busy with patient surge
- Need solutions – low impact on hospitals and relief workers

George Thoma, Ph.D.

Chief, Communications Engineering Branch

Solutions

Hospital-based and Community-wide systems

- **People Locator™ – a Web site to**
 - **Acquire photos and metadata (name, age, location) of *missing* or *found* people**
 - **Allow direct search by public**
 - **Notify by email and on wall displays**
 - **First deployed for Haiti earthquake 2010; later for Japan, Philippines**
- **Alternative ways to enter/search for data**
 - **TriagePic – for hospital staff to record photos and metadata, and direct patients to treatment zones**
 - **ReUnite™ – iPhone app**
 - **Laptop, personal devices (cell phone, Blackberry)**
 - **Structured form or in email subject line**

[Search for a Person](#)
[Report a Person](#)
[Resources](#)

This is an organized online bulletin board to aid in locating someone after a disaster.

Anyone may use the search feature, without logging in. Get basic information about someone missing or found, including photos, as reported by family members, friends, or participating local hospitals.

To do more, create a login account with your contact information.

- Report someone as missing, and include photographs of them
- Update that report, e.g., if the person is found or their status changes
- Share the ability to update a report with family members and friends

Participating local hospitals can report basic information about arriving disaster victims. (Suburban Hospital's implementation is furthest along.)

The site does no automatic notification at this time, so check back periodically. But hospital personnel may contact you.

Notice: Submission of information is voluntary. All submitted information will be made publicly available. OMB NO: 0925-0612 EXPIRATION DATE: 6/30/2013 Public reporting burden for this collection of information is estimated to average 0.08 hours per response. This estimate includes the time for reviewing instructions, gathering, and entering data. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: NH, Project Clearance Branch, 6705 Rockledge Drive, MSC 7974, Bethesda, MD 20892-7974, ATTN: PRA (0925-0612). Do not return the completed forms to this address.

Research challenges

- **Image processing for face recognition**
 - *Purpose: to allow search by photo*
 - **Problems: low res, occluded faces, varying pose, confusion with non-face images**
 - **Extract image features (SIFT, SURF) to localize faces**
 - **Extract color, texture features to index face images**
 - **Build system to match features from incoming photo to stored features**
 - **Deliver top 5 best matches**
- **Image processing for photo de-duplication**
 - *Purpose: to reduce search space for efficient searching*
 - **Extract image features from whole image (photo)**
 - **Match features of stored photos, and discard duplicates**

Image processing challenges

Variability in lighting

Misidentified as face

Variability in pose
