TIER Amazon Machine Images - AMIs

TIER produces Amazon Machine Images (AMIs) as part of the automated build pipeline process. These are created in the **Northern California region (us-west-1)**. The current images have the AMI IDs listed in the table.

To launch one of these images in a different region, you will need to copy the AMI to the target region. For information on this process, review the following URL:

http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/CopyingAMIs.html

Once the instance is launched, the steps for configuration are the same as the VM appliances.

Package	AMI ID	
Grouper	ami-e6644a86	Documentation/Release Notes
COmanage (2.0)	ami-04f6d764	Documentation/Release Notes
Shibboleth IDP	ami-0c4f616c	Documentation/Release Notes
