Shibboleth-EZProxy Webinar Archive Available

How can a library use Shibboleth and EZProxy together to better integrate licensed resources with your library software environment? How can newly developed best practices help resource providers and libraries better integrate single sign-on and federated access?

The InCommon Library Services Collaboration addressed those questions in a webinar on January 15, 2010. This webinar is archived and available via Adobe Connect.

David Kennedy, an application developer at Duke University Libraries and chair of the collaboration's vendor subgroup, provided a brief technical overview of the Best Practices developed by the collaboration and demonstrate how Shibboleth and EZProxy can be used together to better integrate licensed resources into your library software environment.

You can find background information on the group's work on the wiki:https://spaces.at.internet2.edu/display/inclibrary/Vendor+Subgroup
