Release Notes for Grouper 2.4

Grouper v2.4.0 includes **276** fixes and improvements over v2.3.0. See the [full list](#).

New Features in Grouper 2.4.0

Most features in Grouper 2.4.0 are also in 2.3.0 patches. The upgrade from 2.3.0 to 2.4.0 is a minor upgrade.

Migrate to new UI	Migrate all screens in Admin and Lite UI to the "New UI" and remove the admin and lite UI. Note, you can add the legacy UI if needed
Deprovisioning	Deprovision access from someone to loses an affiliation or changes jobs
Attestation	Groups and folders can be marked to require periodic membership review. Reminders will be emailed to group owners
Grouper deployment guide	Version 1 of the Grouper deployment guide is an introduction to Grouper and best practices for using it
New messaging strategies	Add new messaging strategies for ActiveMQ, AMQP (e.g. RabbitMQ), AWS
Grouper loader in UI	User interface to show loader configuration, diagnostics, logs, wizard editor
Subject API diagnostics	User interface to analyze, diagnose, and recommend improvements for subject source configuration
Real time SQL loader	Allow a change log table (SQL triggers) or messages to trigger loader updates for a partial population or single user
Instrumentation	Improve and standardize Grouper logging to provide centralized metrics at an institution and the ability to upload stats to a central Internet2 server
Packaging	Docker containers that hold Grouper components for each deployment
GSH next generation	Improve gsh by adding readline like capabilities (line editing, tab completions, history, etc)
Inbound messages	Allow Grouper to read a message queue and act on messages (e.g. membership changes etc)
vt-ldap to Ldapive	Upgrade from vt-ldap to Ldapive
properties config	Convert sources.xml and ehcache.xml to be cascaded properties files

Update 3rd party libraries	Update 3rd party libraries to the latest version that is feasible
-----------------------------------	---

v2.4.0 patches

Upgrading to Grouper 2.4 from Grouper 2.3

Using the [Grouper Upgrader](#) can simplify your upgrade process. Here is a [movie demonstrating the Grouper upgrader](#). The upgrader can upgrade an installed env of the API, UI, WS, client, PSP, etc. If you don't have a build script to manage multiple envs, you might want to use the upgrader.

Upgrade Steps

1. Make sure you are using Java8/Tomcat8.5
2. Download the [grouper installer](#)
3. Run the upgrader for each env (test, prod, ui, ws, etc)

Important Changes in Grouper 2.4 that impact the upgrade

GSH next generation: GSH now uses Groovy shell. If your scripts don't work, set this in grouper.properties. (Though also inform the Grouper developers via Jira or email in case a fix is needed since the legacy GSH will be removed in the future.)

```
gsh.useLegacy = true
```

Convert the ehcache xml file to properties

This is taken care of by the upgrader above. If not, then you can do this manually

1. If you have not customized Grouper caching (generally the case), just delete the ehcache.xml and use the properties file shipped with Grouper.
2. If you have customized Grouper caching
 - a. Run the grouperInstaller upgradeTask to convert this file
 - b. Copy the grouper.cache.properties to all envs (prod, test, ui, ws, etc)

Convert the sources.xml to subject.properties

This is taken care of by the upgrader above. If not, then you can do this manually

1. Run the grouperInstaller admin upgradeTask to convert this file
2. Copy the subject.properties to all envs (prod, test, ui, ws, etc)

vt-ldap was converted to Ldapative

1. Test your LDAP loader and subject sources to make sure they work correctly. Note that if you use LDAP for your subject source, your configuration **must** change. For more details, visit the [vt-ldap to Ldapative migration for LDAP access](#) page. Also, try the [subject source diagnostics](#) to confirm your configuration.

Note that the admin and lite UIs are removed

1. If you know of applications which deep link to the admin or lite UIs, update those links.
2. If you have a reason to continue using these old UIs, there is an option to manually redeploy them. (Though let us know if there is a missing feature or issue in the New UI.)

Custom member fields have been deprecated

1. This was a very uncommon feature so most people should not be impacted. Previously, each individual group could have multiple membership lists. There would be the default list of members, but then you could also specify separate membership lists as well. Going forward, the best practice is to use separate groups for those custom lists instead. Custom lists are not supported in the New UI, but if you still use them, they will be available in the Admin UI if you choose to manually redeploy it.

Schema updates

1. In previous Grouper upgrades, it was very common for large schema updates that required downtime to make the adjustments. For the 2.3 to 2.4 upgrade, the only updates are new indexes and a new table. The upgrader will automatically add these without requiring a downtime.

Check logs

1. Login to your UI, do some WS calls, and check your logs for errors

Internationalization

1. if you use internationalization, change grouper.properties
 - from: grouper.text.bundle.1.fileNamePrefix = grouperText/[grouper.text.fr.fr](#)
 - to: grouper.text.bundle.1.fileNamePrefix = grouperText/[grouper.textNg.fr.fr](#)
