

# new topics

## Proposed Topics

- SPML - open source provisioning and de-provisioning
- minimalist approach to attributes required for SPs
- guidelines for app developers - coding for federated identity
- what will it take to make open source options attractive to decision-makers?
- what kinds of documentation are needed? for which audiences? plan for your environment...
- K12-related issues, best ways to support and encourage their involvement
- alternatives for connecting centralized group services to legacy apps
- how to integrate LoA? What are the appropriate integration points for a person registry? Service interfaces in front of the person registry...
- Grouper/KIM integration -- can this be extended beyond Kuali?
- reference implementation of end-to-end solution - can the scope be appropriately defined? what is missing from open source IdM for higher ed?
- coordinating open source IdM landscape efforts
- policy and policy engines - is this solved?
- how to handle loosely affiliated populations - e.g. prospective students. when an app needs a few users not already in the IdM system, how is this handled?
