Participating Project Survey

⚠️ **Terminology**

Please reference the MACE-paccmann Glossary for assistance with terminology.

Respondent

Please indicate who you are and your relationship with the project you're responding about.

Goal/Problem Space

Provide a one paragraph description of what your project is trying to accomplish.

Features

Provide a brief inventory of the major features/out-of-the-box functionality provided by your project.

Technology Stack

Provide a brief inventory of major technologies your product is built on/uses. eg: Java, Spring, etc.

Identity Services

Please indicate which of the following identity services you consume, produce, or broker/convey.

- **Consume**: Your project uses the services described. For example, you use identification information to determine which person you are dealing with, and you are a client to an authentication interface to confirm the person's identity.
- **Produce**: Your project provides the services described. For example, you provide facilities to manage groups and can write them out to LDAP.
- **Broker/Convey**: Your project serves as a middleman, taking data from a producer and providing it to a consumer. For example, you verify authentication information and then generate a SAML assertion.

Standards and Interfaces

For the items you indicated in the previous question, standards/protocols/interfaces/etc do you support? eg: SAML, LDAP, etc.

Issues and Challenges

Please briefly describe any issues or challenges you may have with integration of identity services.

More Information

Provide links to additional documentation about your project.
