SCOPE - IN vs. OUT

Discussion of scope

Chunk	Out of Scope	In Scope
Registries	relationships among objects	matching engine (merging and splitting Identities) ID store: schema, interfaces, object., Management functions notification reconciliation statefulness multiple credentials crosswalk or mapping of multiple credentials multiple identifiers
Data Presentation		
Provisioning		FC-NG/Grouper: Realtime provisioning FC-NG: • SCIM/SPML Standards work • Connectors (beyond LDAP and AD) • Improve Statefulness (Grouper might be able to fill this GAP per Chris's comments) ○ Need improved documentation, recipes, usage/implementation patterns
Access Management		Grouper: Service/Application Registry, Improved UI (for developers) KIM: Service APIs into KIM, Improved UI usability for devs GAMS (Groups project from UW), document recipies
Authentication	distributed session management non-web federated authentication	Production & management of strong authenticators (certs and 2 Factor) password management single log out
Access Certification	compliance management	reporting audit attestation
Policy Management	Policy mgmt	
Personal Profile Management		Person attributes beyond those needed for identity reconciliation, needed by a myriad of campus applications/customers

Thing	Registries	Data Presentation	Ops /Int	AuthN	Acc Mgmt	Acc Cert	Policy	Profile
