cm_co_petition_attributes

Table	cm_co_petition_attributes
Description	Per-CO enrollment petition attributes

Column	Format	Description	Definition	Comments
id	integer, primary key	Row identifier	autoincrement	
co_petition_id	integer, foreign key	CO Petition Record ID	cm_co_petitions:id	
co_enrollment_attribute_id	integer, foreign key	CO Enrollment Attribute Record ID	cm_co_enrollment_attributes:id	
attribute	varchar (80)	Name of this attribute		A single co_enrollment_attribute_id can point to more than one attribute, since (eg) the enrollment attribute 'Name' actually has several attributes (given, middle, surname, etc)
value	varchar (160)	Value of this attribute requested for this Petition		Note values are cast to varchar.
attribute_foreign_key	integer	Row identifier of this value in the table described by co_enrollment_attribute_id		The intent of this column is to link the attribute stored in the petition to the table that implements the production value. This linkage is primarily intended for the early part of the petition lifecycle, eg: to edit a petition. **There is no referential integrity enforced on this column**, and over time the foreign keys may become invalid.
