OSIdM4HE Vision

OSIdM4HE enables research and higher education institutions to fully engage in the modern Internet- and cloud-powered information environment by providing a full suite of modular, highly-functional, open-source identity and access management products tailored to R&HE needs. OSIdM4HE meets the needs of large institutions and small ones, those deploying the whole suite or only parts of it, and those needing to integrate it with other IAM products and outsourced and cloud-based services. OSIdM4HE IAM projects and products provide a platform for collaboration in R&HE on consistent, interoperable deployment of identity and trust services across the sector.

[OSIdM4HEteam:Cost-effective? Secure? Other buzz-values?]
