The Identity and Access Management Technical Architect Group (IAMTAG) is integrating Grouper into the Central Person Registry(CPR). Grouper will be used to manage all users authorized to access CPR web services and CPR data employing the Role and Permission Management features of version 2.0.

Update February 2015

Penn State currently has Grouper V2.2 deployed in test. We use Grouper to create our enterprise groups including the eduPerson affiliation groups and push that to our Central Person Repository. We plan to use Grouper for the access management of our Central Person Repository.
