Does your campus use Microsoft's Active Directory? Are you interested in the InCommon Assurance Program; specifically, making the move to the Silver level of assurance? Join us to learn about a community project and case studies from two campuses who are doing both.

A number of InCommon participant institutions are preparing for certification for the InCommon Silver level of assurance. In their gap analysis work, they identified several challenges with supporting the Silver practice set (or profile) using Microsoft's Active Directory Domain Services (commonly referred to as "Active Directory" or "AD"). Now, almost a year later, the group has finished their work on a "cookbook" for configuring AD for compliance with the technical requirements of InCommon Silver.

Speakers

Nick Roy, University of Iowa

Mark Rank, University of Wisconsin-Milwaukee

Chris Spadanuda, University of Wisconsin-Milwaukee

Moderator

Ann West, InCommon Assurance Manager
