25 May 2012

InC-Student Collaboration - May 25, 2012

Attending

Michael Gettes, Carnegie Mellon
Karen Hanson, University of Wisconsin-Madison
Keith Hazelton, University of Wisconsin-Madison
Nate Klingenstein, Internet2
Mark McConahay, Indiana University
Arnie Miles, Georgetown University
Harry Nicolos, NCSU
Vince Timbers, Penn State
Ann West, Internet2/InCommon
Khalil Yazdi, Internet2

Action Items

- All to update the use case page with your campus use case. Please include your campus name in the use case so we know your specific requirements
- Ann to start documenting HE requirements

Notes

Authentication Use Cases

First Production Version: What do you need?

CMU - two use cases - Michael

- 1) applying through CommApp apply to CMU
- 2) common app id to login and obtain andrew id to get permanent credentials.
  Get to campus, might up loA later. Want to eliminate confusion about how to elimate
- No LoA 2 for first stage
- Send CommonApp id (and Commit id) to CMU when they log in? Don't know.
- Won't use CommIT after get permanent credentials when they matriculate
- Why - CMU will raise LoA later, Should be able to use a campus id to
  transfer once they are in HE.
- Over time, CMU believes their id will be stronge
- Value
  - Support costs
  - No need to send out key for activation of permanent credentials.
  - Using ID for Application process so with multiple sites

NCSU - Harry (Use Case #2) -

- persistent identity important
- No LoA 2 for first stage
- Need identifier mapping to reduce admin work on back end.
- Trust the CommIT Id more.
  - Have a history and prior relationship that raise your level of confidence

PSU - Vince

- Matching of third-party information for applicants is most important
  - (CommIT identifiers associated with SAT and ACT scores)
- Fed authn (Use case #2 - need to check with IAM folks)
- No LoA 2 for first stage (probably)
- Once they pay enrollment fees, then they would get PSU Access Account

Wisconsin - Karen/Keith

- Need to speak with Admissions
- Distance Ed/LoA 2 is most attractive - see large increase there
- LoA 2 is good for first stage, but LoA 1 would be helpful.
- Matching and duplicate records important
- Use CommIT to get a NetId.
- No need to send one time key to request NetId

Indiana - Mark

- Will add IU's use case to the wiki.

Basic Use Cases

- fed authn during admissions
- fed suthn to facilitate acquisition of final account
- matching for backend admin.

Levels of Assurance

LoA 1 is standard; LoA2 is gravy.

- First stage - have person registry able to capture.
