

Recommendations For Email Addresses

COmanage Registry can track email addresses, although it does very little with them directly (other than potentially [verifying them](#)). This document provides recommendations for how to store email addresses for different purposes in registry.

Function	Description	Example	Registry Usage (in cm_email_addresses)	LDAP Attribute
display	Address to render in a directory entry, especially for use in a "To:" or "Cc:" field.	pat.lee@myvo.org	Attach to CO Person with type "official"	mail (per RFC 4524 and eduPerson)
delivery	Delivery location (eg: mailbox).	plee@mailhub.myvo.org	Attach to CO Person with type "delivery"	mailForwardingAddress
forwarding	Address to forward mail to, perhaps if received at a display address or an acceptance address when there is no delivery address.	pat.lee@gmail.com	Attach to CO Person with type "forwarding"	mailForwardingAddress
acceptance	Alternate addresses to accept for mail delivery or forwarding.	plee123@university.edu, pleee@aol.com	Attach to Org Identity with type "official" or CO Person with type "personal"	mailAlternateAddress
