

Upgrading CakePHP

Issues to Consider and Process for Upgrading CakePHP

This page details issues to consider and the process for upgrading CakePHP and is only of interest to the CManage developers and not users or deployers.

Patch DboSource.php

~~As of version 2.3.5 of CakePHP there is still a bug with DboSource.php. See [CG-446](#). A patch file can be found in svn at `comanage/registry/vendor/cake/patches/DboSource.patch`. Be sure to apply this when updating cake.~~

This no longer applies.
