Getting Started with Federated Identity Management

Getting Started with Federated Identity Management

CAMP Pre-Conference

Wednesday, November 13, 2013 1:30 pm - 5:00 pm (PT)

AGENDA

This pre-conference workshop will focus on the primary principles that underlie an effective identity management system, look at how federated IdM fits and why it is important, and introduce you to InCommon services.

If you are just starting in the world of identity management, and are interested in federated identity management and InCommon, this workshop is for you. We'll use an interactive approach, based on case studies, to provide you with:

1. Introductory knowledge of identity management and federation
2. Security implications of IdM and federated IdM
3. Exercises to help you evaluate your users, resources and policies
4. An introduction to InCommon and how to get started

Please note that there is a separate registration fee for the pre-CAMP workshop.

About CAMP: Managing Identity and Access in an Era of Distributed Services

Are your campus stakeholders looking at cloud-based solutions? Are you experiencing challenges or do you have concerns with outsourcing email, storage, or other essential services? Are you concerned about the management and maintenance of an accurate, accountable identity inventory? Come to "CAMP: Managing Identity and Access in an Era of Distributed Services" and learn about solutions being discussed and implemented across higher education.

Registration

Registration is open for Pre-CAMP
and **CAMP.**
Remember that there are separate registrations for each of these three meetings.

Hotel

All of the Identity Week meetings will take place at the San Francisco Airport Marriott Waterfront Hotel (located in Burlingame, just south of SFO). Please use this link to make your reservation and receive the Identity Week meeting rate.
