

API

As of Q3 2015, the CIFER AOI work has been transitioned to the [TIER-Data Structures and APIs Working Group](#).

The CIFER API work is intended to develop standard APIs in various areas, in support of the loosely coupled nature of CIFER software. By having standard interfaces, it becomes easier for adopting sites to swap similar components, or to swap homegrown code for community code.

All API work is currently in draft state.

- [SOR to Registry API](#) (includes [ID Match API](#), [Write API](#) and [Core Schema](#))
- [Registry Extraction API](#) (includes Notification and Read)
- [Authorization Standard API](#) (aka "Group API")
- [Account and Credential Management API](#)
- [CIFER API Framework](#)
- [Messaging API](#) (discussion and examples)
- [Subject Representations](#)
- [ApereoCAMP Notes](#)
- [GitHub repo](#) of API documentation in RFC style
- [Open Issues](#)
