

Internet2's InCommon Community Welcomes its 200th Sponsored Partner

Internet2's InCommon Community Welcomes its 200th Sponsored Partner

DocuSign joins trust federation for U.S. research and education community

Internet2 is proud to announce that InCommon—the trust federation for U.S. education and research institutions—has welcomed its 200th Sponsored Partner. DocuSign, the nation's leading electronic transaction management company, has joined InCommon. DocuSign is welcomed to a community of 461 higher education institutions, 33 government and non-profit research centers and agencies, and 200 corporate and non-profit Sponsored Partners.

DocuSign's digital transaction management platform helps organizations keep processes 100 percent digital from start to finish and allows for the secure electronic sending and signing of documents. In addition to joining InCommon, the company is also participating in the Internet2 NET+ program, where it is moving through the service validation phase.

"This year marks the 10th anniversary of InCommon whose significant growth continues to accelerate," said Shelton Waggener, senior vice president of Internet2. "Hundreds of universities, institutions and companies have seen the benefit of a collaborative trusted, scalable approach to identity and access management. I invite all of the research and education community, and the commercial partners who serve them, to join this community-led approach to trust services."
