Feature requests for Grouper UI v2.3

Request name	Description	Requester (s)	Notes	Priority
External users	Migrate the Lite UI external users screens to new UI	Chris	DONE - 2.3.0 API patch 107, UI patch 44	1
Attribute definitions and permissions	Migrate the Lite UI attribute screens to new UI	Chris	DONE - 2.3.0 API patch 107, UI patch 44	2
Rules editor	Be able to edit common rules and / or all rules in UI	Michael Gettes		3
Auditing	Add user based and overall (point-in-time) auditing	Tom Barton	DONE - 2.3.0 API patch 107, UI patch 44	4
Attribute handling at objects	It would be really nice to handle attribute usage for groups, memberships and so on the page that handles the object. See the UI being developed at Uppsala University .	Uppsala University Cru (CCCI)		5
Encapsulated composites	Would be nice if the UI treated include/exclude lists and require groups differently (maybe if they follow a naming convention) so the user doesn't need to know which group is the whitelist etc, the UI makes it easy. Maybe this is in phase 2... If looking at the full group the UI knows to edit the whitelist etc.	Steven C. Chris		6

Features in the new UI in Grouper v2.2

[link to documentation on the Grouper v2.2 UI](#)

Feature
User experience designer created look and feel and did user testing
Accessible controls which can be controlled by keyboard only
Responsive layout is mobile friendly
Cross site scripting secure
Ajaxy implementation allows for functions to be completed without navigating from page
Tree control for folder browsing
Objects can be favorited for easy finding from splash page
"Services" tag can group objects together into one application
Dashboard shows recent activity, tree control, favorites, etc
Bulk assignments screen for adding memberships for multiple members to multiple groups
Much easier privilege management for folders and groups
Can deprovision memberships and privileges easier
