

Identity Services Clearinghouse

Welcome to the home of the Identity Services Clearinghouse space.

On June 18-19, 2009 in Philadelphia PA, a group of architects, developers, and deployers of higher ed open/community-source software projects gathered together to explore IAM issues and challenges at the Internet2/Educause Advanced CAMP: Identity Services Summit for Open/Community Source Projects.

This provisional clearinghouse is an outcome of the need for more coordination about identity services across the open source community.
