

CIFER Shared API Guidelines

You see here the early stages of a wiki space highlighting the work products of the CIFER Shared API Team.

Shared API Team Goals:

1. Develop and document general guidelines for the creation and use of APIs across the Identity and Access Management landscape.
2. Design APIs suited to the specific needs of education and research settings.
3. Develop and document specific APIs around individual IAM capabilities such as system-of-record to registry operations, identity matching, group management and others.

More to come...
