

# External Identities Work Group Meeting - 2015-03-12

## Agenda

Review and Discussion of Document draft at: [https://docs.google.com/document/d/1IVDjmdCqToB9aGAIF5SVLCmVHskCqmtN7kW\\_jRhOWPs/edit?usp=sharing](https://docs.google.com/document/d/1IVDjmdCqToB9aGAIF5SVLCmVHskCqmtN7kW_jRhOWPs/edit?usp=sharing)

## Minutes

Discussion addressed the following points. David and Eric to edit to incorporate.

## Missing items/topics

- Issue of social providers that will issue a globally unique, persistent identifier that's not targeted.
  - API call limits
  - Privacy/Consent
    - Should there be local and external ID consent?
- *Is "you" (the audience) the SP or the IdP?*
- Stronger call out of external identities with local identities and without local credentials
- Describing identities versus credentials as a callout
- How do you initiate creation from external ID vs. linking
  - Linking across providers... is that the bigger issue?
  - Is password reset any different for external identifiers?
    - If I lose my social ID (my credential) how do I regain access to my identity?

## Other thoughts

- Really comes down to attribute alignment and authorization
- Need to manage to "prospects", have people log in using an external identifier
  - Use external credentials with an internal identity
  - Only when they accept applications are they granted an internal credential
    - At this point will have two credentials, possible different LoAs
- Applicant emails are increasingly high school provided addresses
