## Multifactor Authentication: Campus Deployment Case Studies

It's a hot topic in identity management. It's a hot topic in security. Campuses are rolling out multifactor authentication (MFA) in the wake of phishing attempts to compromise direct deposit programs and other major security concerns. This webinar will provide an update on community work on MFA interoperability and two campus case studies implementing MFA. Topics include:

- An update on the InCommon MFA Interoperability working group, which will define requirements for an interoperability profile (<https://spaces.at.internet2.edu/x/CY5HBQ>)
- A report from the University of Colorado, which has gone from zero to 34,000 MFA users in six months
- Information from the University of Texas at Austin on their deployment of a major MFA program with Toopher and is now moving to Duo after the Salesforce buyout of Toopher

Learn about the reasoning and issues involved with these projects, as well as the key questions that were addressed by these large-scale MFA deployments. Find out what to consider, whether you are just interested, or if you face a deployment of a few users or thousands.

### Speakers:

C.W. Belcher, University of Texas at Austin  
Brad Judy, University of Colorado  
Paul Caskey, Internet2/InCommon

### Connecting

We use Adobe Connect for slide sharing and audio: <http://internet2.adobeconnect.com/iam-online>. For more details, including back-up phone bridge information, see [www.incommon.org/iamonline](http://www.incommon.org/iamonline).

### About IAM Online

IAM Online is a monthly online education series brought to you by Internet2's InCommon community and the EDUCAUSE Higher Education Information Security Council (HEISC).
