

# 2016-04-08 Minutes

Itana weekly call - 2016-04-08

rollcall

no addition to agenda

steering update - Brenda Reeb took new position. Working on her new business.

Hopefully will stay with Steering.

spring f2f. ~12 attending in 2 weeks (4/20-22).

still have room in st louis to join. register on the wiki.

no call in 2 weeks (4/22/16). next call is scheduled for 5/6/16.

Bob Dein could not attend to give his talk on "Planning using EA, Case Study". going impromptu.

JimP beginning a new project - "Innovation Zone".

EIP and EW - Access To Data

EIP pulls data out of Workday (and other feeds) to aggregate share info out.

similar to what he did at Wisc on curriculum data.

a place to work on good practice on innovation layer (re PACE Layer from

Gartner [http://www.gartner.com/document/3036617?](http://www.gartner.com/document/3036617?ref=solrAll&refval=166002824&qid=fb5f59c85522f5316f32e9aa840b7867)

ref=solrAll&refval=166002824&qid=fb5f59c85522f5316f32e9aa840b7867)

innovation listed as competency. how to innovate that roll into production. It's about learning.

creating a strategy to access data. modifying existing practices as well.

realigning security to have a common model as well.

also realigning governance and management

conceptual strawman - 3 tiers of data use

want easy. light. contained impact. controlled escalation.

need to capture and prove business value. (group layer)

then move into enterprise tier — utility and warranty. Notre Dame also has

BI tiering that is similar.

Q - Missed Question/Comment from Louis@Yale.

Jim - API management view/domain

Q - Mike Janke @Minn attempting to do something similar. "Integration Hub".

Do ETL in common env.

Jim - EIP -> EDW screenshot.

want to join enterprise integration once and do it well, including metadata tool.

not all need to go into EIP.

transactional (need state) won't go in EIP either.

Q - have you considered data virtualization?

Jim - EIP basically caching, rewrites every 2 hours.

Enterprise Info Management Capabilities.

need to align the two groups. tightly.

integration development there because people abuse the BI interface to do that kind of work.

Q - what bottlenecks you see?

Jim - get data out of Workday and well defined.

Jim - BI analytics. finding right source of enterprise data, brought in, documented, match needs of user.

EIP has some APIs for IAM (not shown in slides)

DAMA DMBOK2 (<https://www.dama.org/content/body-knowledge>) - find it good for discussion

DAC (data access control) and SMAT (security management access? tool) layer between EDW and reports/virts, etc.

policies are separate from control

need to define what is the governance, driver, values, processes, reqs for Personal/Group/Enterprise tiers. then lead into a maturity model.

committees have been mostly reactive, and not proactive. move to strategy, not tactical. be data driven. guardrail -> data management and treat data as an asset to deliver business value.

Q - What do you use for diagrams?

mostly from google, or lucid in google. non-proprietary

definitely wants input on the Personal/Group/Enterprise. capture ideas in an innovative process.

Q - library services, academic materials. measure/understanding use?

Jim - enterprise meaningful via a management layer. can measure then.

process info. increase business value by offering.

willing share slides decks now or when closer to being finalized.
