

# TIER Package Delivery

**This page has been deprecated and active content has been moved to [this page](#).**

The three-year TIER program reached a successful conclusion at the end of 2018. The program, funded by 49 investor schools, involved containerizing and connecting the Internet2 Community's key open-source Identity and Access Management software components, significantly reducing the time and effort needed for installation, configuration, and upgrades. The result is the new [InCommon Trusted Access Platform](#), an IAM suite meeting the specific needs of research and education. Please visit the [InCommon Trusted Access Platform wiki](#) for more information, including links to software downloads.

## TIER: Production Releases

The TIER team is grateful for everyone who evaluates and uses these releases.

Docker Containers

## TIER - Current State of Components

This document, TIER Accomplishments by Thematic Groups, provides the current state of the component portions of the TIER program and planned future activities. It draws from initial documentation of TIER program requirements and subsequent working group accomplishments. It also includes items flagged "[Must2018]" which have been identified by the component architects as being required to be completed before the end of 2018.

## Need Basic Information?

Visit the [TIER 101](#) page.

## TIER Release Reports

- [December 2016](#)
- [April 2016](#)

## Campus Practices Included in the TIER Program

- MACE-Dir eduPerson
- InCommon Multifactor Authentication Profile
- InCommon SAML V2.0 Implementation Profile for Federation Interoperability 20160303
- InCommon Global Interfederation Integration

## NOTE:

Starting with the 17040 release, the TIER components contains functionality from phase 1 of the TIER Instrumentation work. If you need to disable this functionality, you can configure a manual setting in the local Dockerfile on the VM. There is a commented section near the top of the file that instructs you to uncomment a single line below which will disable the TIER Instrumentation functionality.

## Docker Containers

### Shibboleth IdP Docker Linux Container (3.4.3)

- Current release: 20190201
- Container Image Name: tier/shib-idp:3.4.3\_20190201
- Status: New build with updated tomcat
- [Container Source Code](#)
- [Release Notes](#)

### Shibboleth IdP Docker Windows Container (3.4.3)

- Current release: 20190201
- Container Image Name: tier/shib-idp-windows: 20190201\_3.4.3
- Status: New build with updated tomcat and java
- [Container Source Code](#)
- [Release Notes](#)

### Shibboleth IdP Config Builder Container

- Current release: 0.3
- Status: Stable
- [Container Download](#)
- [Container Source Code](#)
- [Release Notes](#)

### Shibboleth SP Linux httpd Container (3.0.3)

- Current release: 181201
- Container Image Name: tier/shibboleth\_sp:3.0.3\_181201
- Status: New build of new SP major rev
- [Container Source Code](#)
- [Release Notes](#)

### Shibboleth SP Windows IIS Container (3.0.3)

- Current release: 181201
- Container Image Name: tier/shib-sp-windows-iis: latest
- Status: New container
- [Container Source Code](#)

### Grouper Linux Container (2.4.0)

- Current release: 2.4.0-a29-u14-w3-p2-20190217
- Container Image Name: tier/grouper:2.4.0-a29-u14-w3-p2-20190217
- [Container Source Code](#)
- [Release Notes](#)

### Grouper Linux Container (2.3.0)

- Current release: 2.3.0-a109-u47-w13-p24-20190208
- Container Image Name: tier/grouper:2.3.0-a109-u47-w13-p24-20190208
- [Container Source Code](#)
- [Release Notes](#)
- [Training Videos](#)

### COmanage Linux Container (3.2.0)

- Current release: 20190101
- Container Image Name: tier/comanage:3.2.0-20190101
- [Container Source Code](#)
- [Release Notes](#)

### midPoint Linux Container (3.9 Preview)

- *Coming soon...*

The links below are to virtual machine images, which are designed to be Docker build/run machines and are preloaded with the appropriate set of Docker containers. The VMs are intended primarily for campuses that do not currently operate container-based applications or are new to container-based applications. AMIs, for running in AWS, are also available [here](#).

### Virtual Machine Images and Documentation

#### COnanage Registry (3.1.1)

- [COnanage VM](#) (1.3 GB)
- [Documentation/Release Notes](#)

#### Grouper (2.3.0)

- [Grouper VM](#) (1.0 GB)
- [Documentation/Release Notes](#)

#### Shibboleth IdP VM (3.3.1)

- [Shibboleth VM](#) (1.2 GB)
- [Documentation/Release Notes](#)

Amazon Machine Images (AMIs)

### Amazon Machine Images (AMIs)

#### COnanage Registry (3.1.0)

#### Grouper (2.3.0)

#### Shibboleth IdP VM (3.3.1)

If you will be using the released VMs, below are a few suggestions:

- The VMs are designed to be run in VirtualBox. If you are not familiar with VirtualBox, you can read the documentation and download the software from the [Oracle's web site](#).
- AMIs, for running in AWS, are also available [here](#).
- Once VirtualBox is installed and running, you import the .ova distribution using the File / Import Appliance function.
- The default network connection for some of the Virtual Machines is NAT. This works well if you want to log into and examine the VM and containers. But to connect to services hosted by the VM, you'll likely want to switch the network to bridged mode. This will give the VM an IP address from your network's DHCP server and provide you with the ability to access services from a browser.
- Please review the Release Notes for installation instructions and additional information on VirtualBox setup.
- Remember to change the login password(s) before you place the VMs on a public network.
