List of IdP Display Names

List of IdP Display Names in InCommon Metadata

⚠️ *This page is auto-updated every business day*

This is a complete list of IdPs in InCommon metadata, including IdPs from other federations. The **IdP Display Name** column in the table is typically shown on discovery interfaces unless the IdP belongs to the Hide From Discovery Category.

Frequently Asked Question

How do I interpret the values in each column of this table?

IdP Display Name. The name in the **IdP Display Name** column is either `mdui:DisplayName` or `md:OrganizationDisplayName` (in that order). If neither `mdui:DisplayName` nor `md:OrganizationDisplayName` are available in entity metadata, the word "NONE" will be shown. In that case, the IdP **Entity ID** will be used on the discovery interface.

Entity ID. This is the `entityID` XML attribute in entity metadata.

Discovery. The value in the **Discovery** column depends on whether the IdP is a member of the Hide From Discovery Category. IdPs tagged with the `hide-from-discovery` entity attribute are typically not shown on discovery interfaces.

Registrar ID. This is the `registrationAuthority` XML attribute in entity metadata.

✅ **How to navigate this page**

Click a column heading to sort on that column. Use your browser's **Find command** to search this page.
